Foodr – My Restaurants – Phong Bach

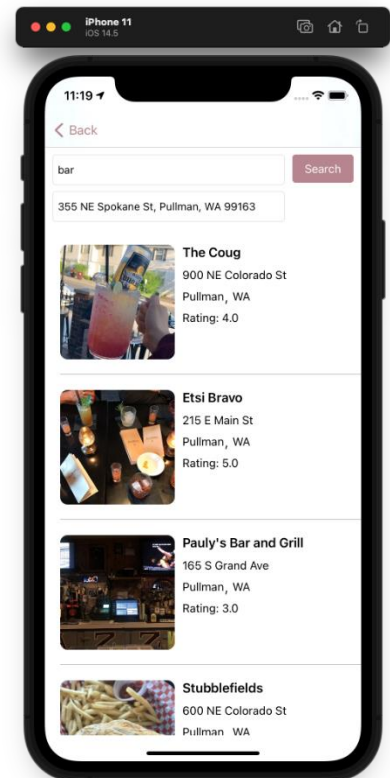

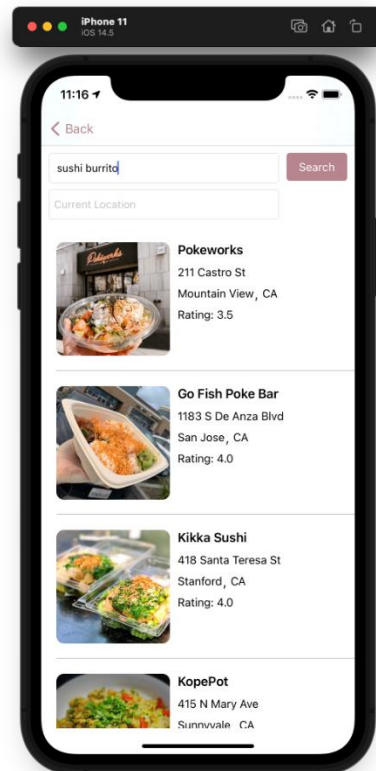

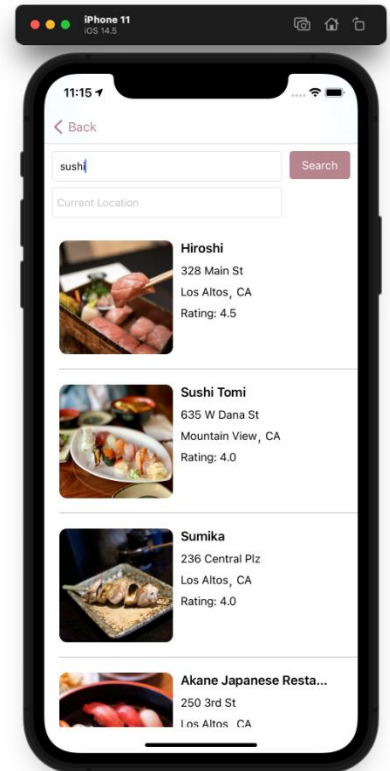

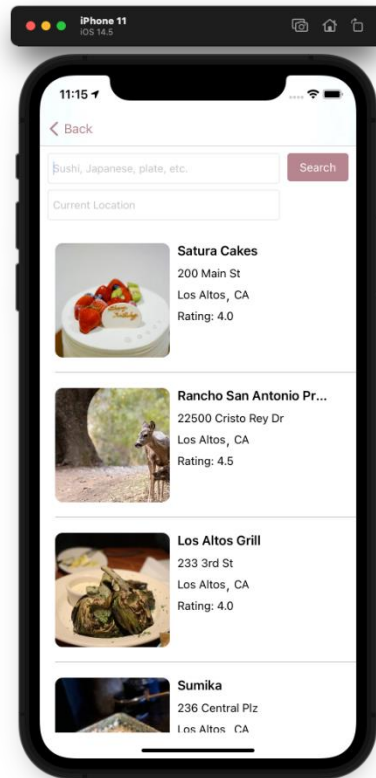

1. When the user first open the app, the app asks for permission to use location to search for nearby restaurants. Choose “Allow While Using App”.
2. In the main menu of the app, the user can:
 - Search using *Search Restaurants*
 - See *All restaurants*
 - See *Food* category
 - See *Drink* category
 - See *Dessert* category
 - Get a random restaurant in the list using *Zimzalabim!*
3. On the bottom right of the screen, the user can tap the circular button with a plus sign to manually add a restaurant.

4. In the Search Restaurants view, the user can:

- Tap Search without any search keyword to search all businesses
- Tap Search without an address to search for nearby businesses
- Search using one keyword
- Search using multiple keywords
- Search in a specific address

The user can tap on a restaurant to go into a detail view.

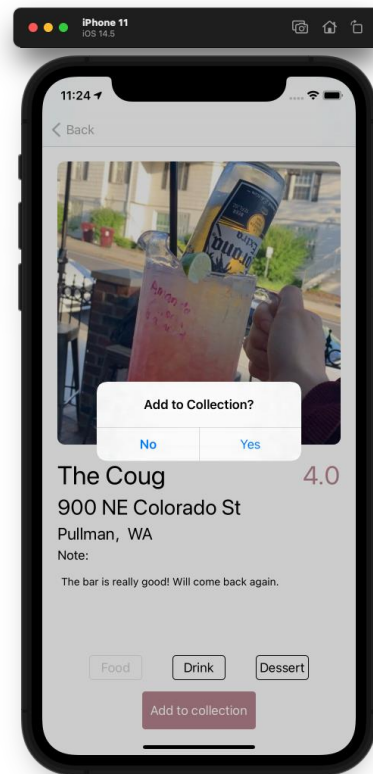

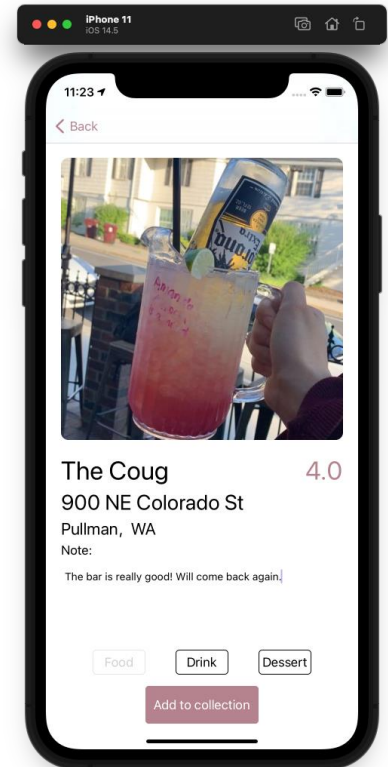

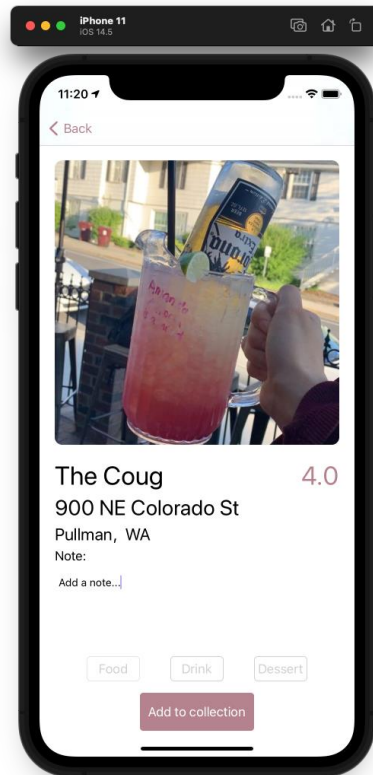

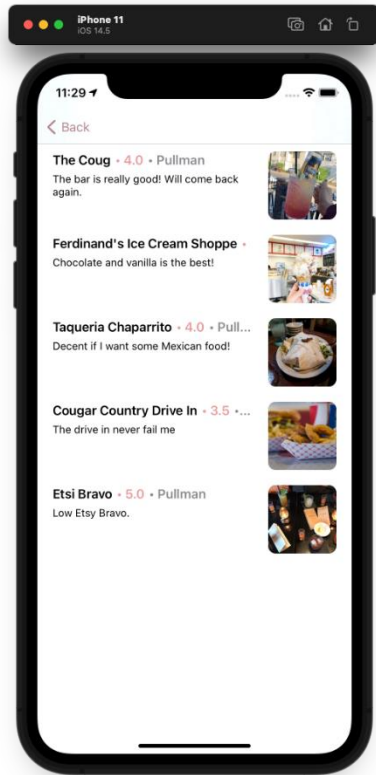

5. In the detail view, there are the name, address, rating, and note. The user can:

- Add a note in the note section
- Choose the categories for the restaurant (*Food*, *Drink*, or *Dessert*).
- Select or deselect the categories
- Tap the *Add to collection* to add the restaurant to personal collection

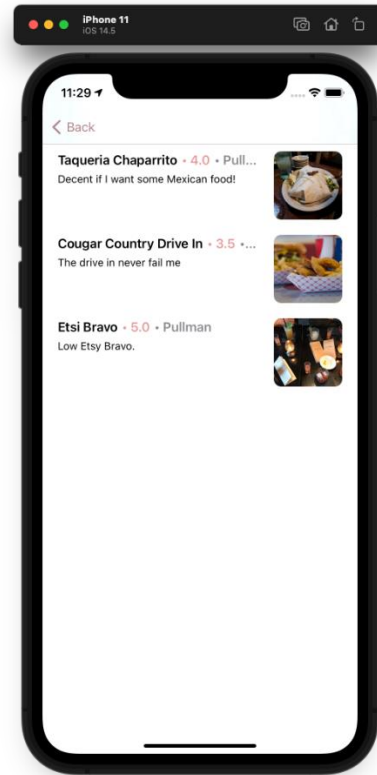

A notification pops up to ask the user again whether they want to add the restaurant to collection. The user can choose *Yes* or *No*.

6. The user can check out their collection using *All Restaurants* category, *Food* category, *Drink* category, or *Dessert* category. All restaurants category show all restaurants. The other categories only show the restaurant in that category that the user added.

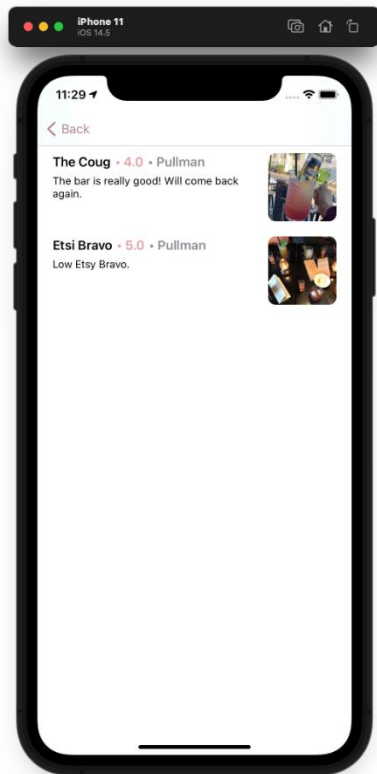

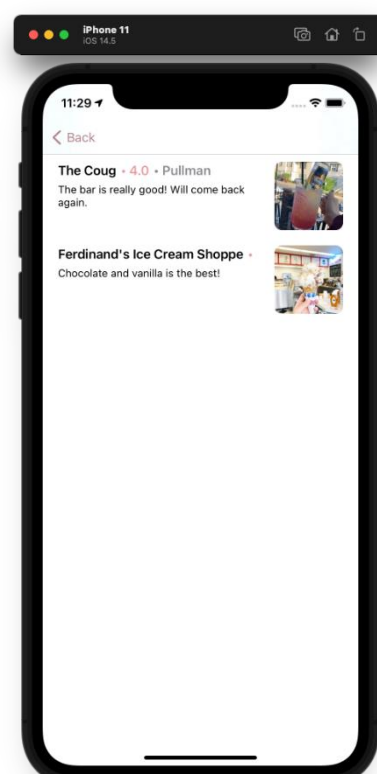

1. All restaurants View

2. Food Category View

3. Drink Category View

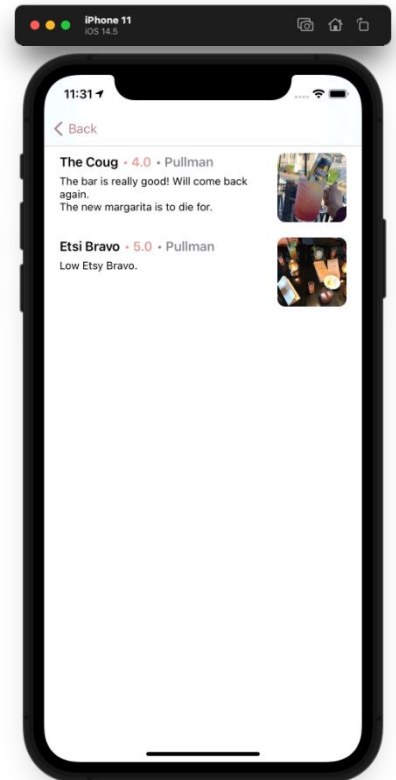

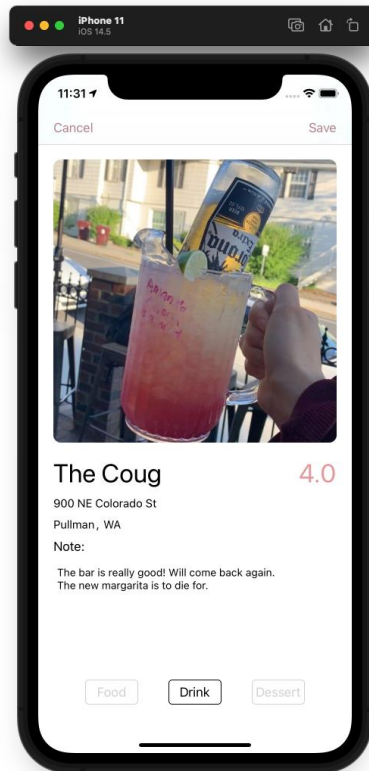

4. Dessert Category View

7. From the category table view, the user can tap on a restaurant to go to the detail view. The detail view also shows the name, address, rating, note, and the categories it belongs to. The user can:
- Edit the note
 - Change the category

The user can tap *Save* to save the edit or *Cancel* to cancel the edit and go back to the previous view.

The note gets update when the user return to the previous view.

The categories of the restaurants also get updated (the dessert category is removed so the *Dessert* view will not show the restaurant anymore).

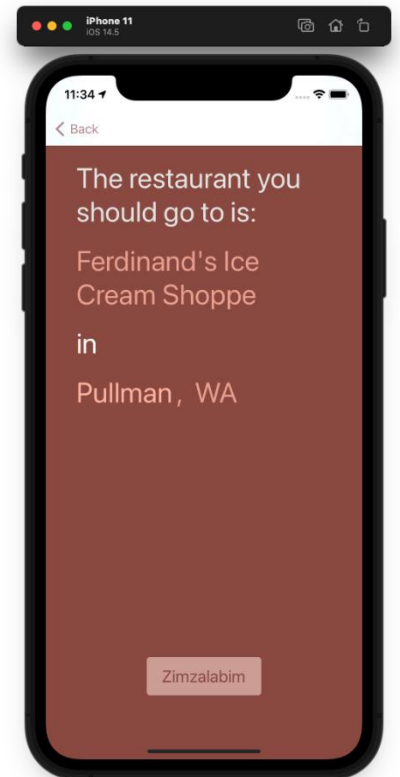

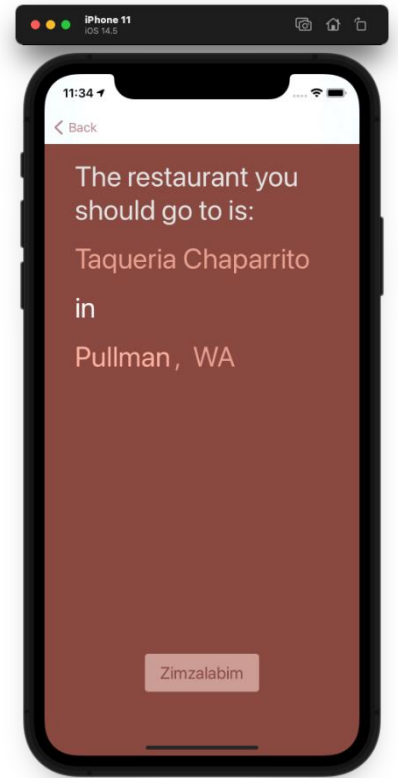

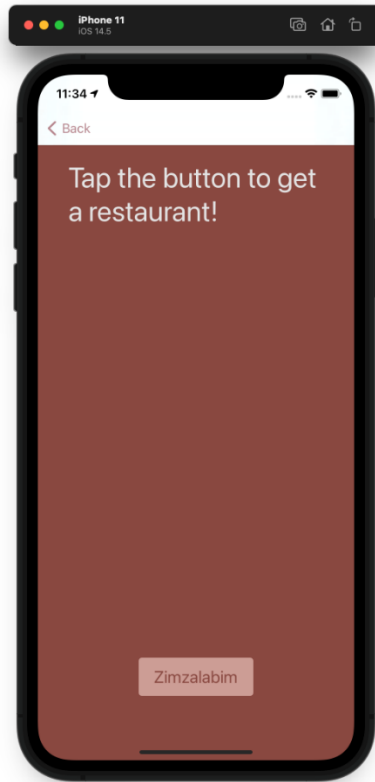

3. Drink Category View

4. Dessert Category View

8. When the user tap the *Zimzalabim!* Button, the *Zimzalabim* view get a random restaurant in the user's collection. The user can choose to tap the *Zimzalabim* button again to get another option.

9. When the user taps the circular button with the plus sign in the main menu, the user is presented a pop-over to manually add the information of a restaurant. The text view has placeholder to show what type of input the user should put in. The user can tap Add to add to collection or the x button on the left to discard. The newly added restaurant can be seen in the *All restaurant* category.
